This book offers students a comprehensive, theoretical, and practical guide to communication theory. Croucher defines the various perspectives on communication theory—the social scientific, interpretive, and critical approaches—and then takes on the theories themselves, with topics including interpersonal communication, organizational communication, intercultural communication, persuasion, critical and rhetorical theory and other key concepts. Each theory chapter includes a sample undergraduate-written paper that applies the described theory, along with edits and commentary by Croucher, giving students an insider's glimpse of the way communication theory can be written about and applied in the classroom and in real life. Featuring exercises, case studies and keywords that illustrate and fully explain the various communication theories, *Understanding Communication Theory* gives students all the tools they need to understand and apply prominent communication theories. CHOICE Outstanding Academic Title for 2009 2008 Best Reference, Library Journal "The scope, depth, breadth, currency, arrangement, and authority of this work reflect the thorough, in-depth approach of the entire editorial and publishing team . . . Advancing current thought and models in the field, this work provides an unparalleled attempt to approach this important subject from many perspectives. Moreover, each volume has a list of entries, a reader's guide, and information about the authors and the contributors. The reader's guide incorporates substantive topics, e.g. assessment, testing and research methods, biographies, coping . . . this is an essential addition to graduate and research collections." —Library Journal Professional counseling involves helping clients, individually or in groups, or as couples and families, deal with various career, vocational, educational, and emotional problems. Whether performed by psychologists, psychiatrists, social workers, psychiatric nurses, or counselors, thousands of professionals throughout the United States, as well as the world, are providing counseling services to fellow human beings to help them address and resolve the various problems of living that exceed their coping resources and social support. The *Encyclopedia of Counseling* provides a comprehensive overview of the theories, models, techniques, and challenges involved in professional counseling. With approximately 600 entries, this definitive resource covers all of the major theories, approaches, and contemporary issues in counseling. The four volumes of this *Encyclopedia* are flexibly designed so they can be used together as a set or separately by volume, depending on the need of the user. We live in a world that is marked by the twin processes of economic and cultural globalization. In this thought provoking book, Kumaravadivelu explores the impact of cultural globalization on second and foreign language education. Culturally Diverse Counseling: Theory and Practice by Elsie Jones-Smith adopts a unique strengths-based approach in teaching students to focus on the positive attributes of individual clients and incorporate those strengths, along with other essential cultural considerations, into their diagnosis and treatment. With an emphasis on strengths as recommended in the 2017 multicultural guidelines set forth by the American Psychological Association (APA), this comprehensive text includes considerations for clinical practice with twelve groups, including older adults, immigrants and refugees, clients with disabilities, and multiracial clients. Each chapter includes practical guidelines for counselors, including opportunities for students to identify and curb their own implicit and explicit biases. A final chapter on social class, social justice, intersectionality, and privilege reminds readers of the various factors they must consider when working with clients of all backgrounds. "The Second Edition of Culturally Alert Counseling is a thorough update to the first comprehensive guide to culturally alert counseling, complete with a companion demonstration DVD. Co-author and editor Garrett J. McAuliffe expands the traditional "definition" of multicultural counseling from the usual two categories of race and ethnicity to seven groupings: race, ethnicity, gender, religion/spirituality, disability, class, and sexual orientation. With case vignettes and interactive activities, students will be informed, moved, and changed by the encounters with culture that lie in these pages. The book and companion DVD encourage readers to examine the complex nature of culture and how it impacts all stages of the counseling process."--Publisher's website. This volume offers a systematic approach to the Persian, Ptolemaic, Seleucid and Hasmonean period, correlating social contexts with the biblical and post-biblical literature that each period generated. The list of contributors includes many of the pioneers of the field of Second Temple sociology, including Kenneth Hoglund, John Wright, Lester Grabbe, Richard Horsley, James Pasto, Robert Doran and the editors. The volume, which also includes an introductory essay on the methods and outcomes of this kind of exercise, furnishes an excellent introduction to the agenda of interpreting biblical texts as social products. This graduate level textbook proposes a different way of looking at the rehabilitation counseling profession that puts family at the center of the person-centered model, not an adjunct to individual counseling. It provides the tools and knowledge-base to effectively work with the family, and within the community, espousing a new inclusive model of care, establishing best practices in research, practice, training, and management. Domestic violence against women is an oppressive condition that extends across race, class, and gender. This work examines intimate partner violence against women in Memphis, Tennessee, focusing on Mexican immigrant and Mexican American female survivors of domestic violence. Author M. Helena Vanderlei Collins interviewed ten Mexican immigrant women and seven Mexican American women to investigate factors that influence helpseeking

behavior. Collins focused on the perceptions of Mexican immigrant and Mexican American women regarding the social services available to them and explored how their help-seeking behavior is affected by their degree of acculturation and the incidence of intimate partner violence. Collins employed a combination of quantitative and qualitative methods to answer seven key research questions. The quantitative instruments included ARSMA-II, the Inventory of Abusive Behavior, and a customized demographic questionnaire. The qualitative data was drawn from the semi-structured interviews with the domestic violence survivors. Collins concluded her study by describing the challenges women of Hispanic origin face when seeking help from social service providers and by offering recommendations on how to improve the quality of services these women receive. IB Prepared resources are developed directly with the IB to provide the most up-to-date, authentic and authoritative guidance on DP assessment. IB Prepared: Psychology combines a concise review of course content with strategic guidance, sample material and exam-style practice opportunities, allowing learners to consolidate the knowledge and skills that are essential to success. Cultural psychiatry is primarily concerned with the transcultural aspects of mental health related to human behavior, psychopathology and treatment. At a clinical level, cultural psychiatry aims to promote culturally relevant mental health care for patients of diverse ethnic or cultural backgrounds. From the standpoint of research, cultural psychiatry is interested in studying how ethnic or cultural factors may influence human behavior and psychopathology as well as the art of healing. On a theoretical level, cultural psychiatry aims to expand the knowledge and theories about mental health-related human behavior and mental problems by widening the sources of information and findings transculturally, and providing cross-cultural validation. This work represents the first comprehensive attempt to pull together the clinical, research and theoretical findings in a single volume. Key Features * Written by a nationally and internationally well-known author and scholar * The material focuses not only on the United States but also on various cultural settings around the world so that the subject matter can be examined broadly from universal as well as cross-cultural perspectives * Proper combination of clinical practicalities and conceptual discussion * Serves as a major source for use in the training of psychiatric residents and mental health personnel as well as students of behavior science in the areas of culture and mental health * A total of 50 chapters with detailed cross-referencing * Nearly 2000 references plus an appendix of almost 400 books * 130 tables and figures Mental and Behavioral Health of Immigrants in the United States reviews research on immigrant mental health, acculturation, and multicultural psychology. The book is divided into three sections: Section A addresses the geographic and social context of immigration, including how parents and children navigate the acculturation process, how different cultural orientations affect behavior, and research methods on acculturation. Sections B and C focus on mental health issues common to Latinx, Asian, and Arab/Middle Eastern immigrants, and then more broadly across immigrant groups. Included here are a focus on depression, anxiety, and somatization, as well as alcohol abuse, insomnia, and issues for LGBTQ+ individuals. Pre- and post-migration stressors are discussed, as well as the effects of prejudice and bias, the mental health effects of religion and spirituality, and managing the demands of both work and family. Contributors from psychology, education, and social work provide different perspectives and identify opportunities for future research. Summarizes research on mental health issues common to immigrants Identifies prevalence of mental disorders among ethnic minorities in the United States Examines the impact of group-based discrimination on mental health Explores the impact of acculturation on mental health Reviews mental health issues specific to Latinx, Asian, and Middle Eastern immigrants Covers alcohol abuse, sleep, and other disorders across immigrant groups The Handbook of Arab American Psychology is the first major publication to comprehensively discuss the Arab American ethnic group from a lens that is primarily psychological. This edited book contains a comprehensive review of the cutting-edge research related to Arab Americans and offers a critical analysis regarding the methodologies and applications of the scholarly literature. It is a landmark text for both multicultural psychology as well as for Arab American scholarship. Considering the post 9/11 socio-political context in which Arab Americans are under ongoing scrutiny and attention, as well as numerous misunderstandings and biases against this group, this text is timely and essential. Chapters in the Handbook of Arab American Psychology highlight the most substantial areas of psychological research with this population, relevant to diverse sub-disciplines including cultural, social, developmental, counseling/clinical, health, and community psychologies. Chapters also include content that intersect with related fields such as sociology, American studies, cultural/ethnic studies, social work, and public health. The

chapters are written by distinguished scholars who merge their expertise with a review of the empirical data in order to provide the most updated presentation of scholarship about this population. The Handbook of Arab American Psychology offers a noteworthy contribution to the field of multicultural psychology and joins references on other racial/ethnic minority groups, including Handbook of African American Psychology, Handbook of Asian American Psychology, Handbook of U.S. Latino Psychology, and The Handbook of Chicana/o Psychology and Mental Health. "This is easily the best, and certainly the most empathic and insightful, treatment of the process of becoming bicultural in the United States that I have read. There is something for everyone in this book--researchers will find scientific evidence, clinicians will find insights to deepen their work, and all readers will find a teenager in its pages whose story will inform them and touch their hearts. Writing in a style that makes reading effortless, Smokowski and Bacallao render the bicultural experience accessible to all of us." LUIS H. ZAYAS, Washington University, St. Louis "This book masterfully captures the stories of Mexican immigrants from the well-established communities in the Southwest as well as from newer communities in the Southeast. It documents a common voice of resiliency and hope and provides an insightful review of the challenges experienced by acculturating youth and their families as they pursue the American dream. A must read for practitioners and researchers interested in understanding the contemporary immigrant experience and its mental health implications." FLAVIO F. MARSIGLIA, Arizona State University Although the United States has always been a nation of immigrants, the recent demographic shifts resulting in burgeoning young Latino and Asian populations have literally changed the face of the nation. While some Latino adolescents become alienated and turn to antisocial behavior and substance use, others go on to excel in school, have successful careers, and build healthy families. Drawing on both quantitative and qualitative data ranging from surveys to extensive interviews with immigrant families, *Becoming Bicultural* explores the individual psychology, family dynamics, and societal messages behind bicultural development and sheds light on the factors that lead to positive or negative consequences for immigrant youth. Paul R. Smokowski and Martica Bacallao illuminate how immigrant families, and American communities in general, become bicultural and use their bicultural skills to succeed in their new surroundings. The volume concludes by offering a model for intervention with immigrant teens and their families that enhances their bicultural skills. A survey of science learning provides information on such topics as the processes in which science is learned and the diversity in science learning. *Culture and Identity* by Anita Jones Thomas and Sara E. Schwarzbaum engages students with autobiographical stories that show the intersections of culture as part of identity formation. The easy-to-read stories centered on such themes as race, ethnicity, gender, class, religion, sexual orientation, and disability tell the real-life struggles with identity development, life events, family relationships, and family history. The Third Edition includes an expanded framework model that encompasses racial socialization, oppression, and resilience. New discussions of timely topics include race and gender intersectionality, microaggressions, enculturation, cultural homelessness, risk of journey, spirituality and wellness, and APA guidelines for working with transgendered individuals. Addressing the increasing number of culturally and linguistically diverse students in today's schools, *Behavior and Classroom Management in the Multicultural Classroom*, by Terry L. Shepherd and Diana Linn, provides general and special education teachers with the knowledge, skills, and strategies to make the proactive, active, and reactive interventions necessary to create a positive classroom environment in which all students can learn. Going beyond the traditional rules and hierarchy of consequences and reinforcements, the book demonstrates how to incorporate basic classroom management plans, functional behavioral analysis, functional behavioral assessments, and behavioral intervention plans into the development and implementation of response-to-intervention and school-wide positive behavior support programs. In every chapter, the authors use real world examples and case studies to explore how language and culture affect students' responses to behavior and classroom management. Unique chapters cover social skills training and collaborating with families of diverse students. This is the first textbook written to welcome those who are new to Asian American psychology. Concepts and theories come to life by relating the material to everyday experiences and by including activities, discussion questions, exercises, clinical case studies, and internet resources. Contributions from the leading experts and emerging scholars and practitioners in the field - the majority of whom have also taught Asian American psychology - feature current perspectives and key findings from the psychological literature. The book opens with the cornerstones of Asian American psychology, including Asian American history and

research methods. Part 2 addresses how Asian Americans balance multiple worlds with topics such as racial identity, acculturation, and religion. Part 3 explores the psychological experiences of Asian Americans through the lens of gender and sexual orientation and their influence on relationships. Part 4 discusses the emerging experiences of Asian Americans, including adoptees, parachute kids, and multiracial Asian Americans. Part 5 focuses on social and life issues facing Asian Americans such as racism, academic and career development. The text concludes with an examination of the physical and psychological well-being of Asian Americans and avenues for coping and healing. This ground-breaking volume is intended as an undergraduate/beginning graduate level introductory textbook on Asian American psychology taught in departments of psychology, Asian American and/or ethnic studies, counseling, sociology, and other social sciences. In addition, the clinical cases will also appeal to clinicians and other mental health workers committed to learning about Asian Americans. This volume understands itself as an invitation to follow a fundamental shift in perspective, away from the self-contained 'I' of Western conventions, and towards a relational self, where development and change are contingent on otherness. In the framework of 'Dialogical Self Theory' (Hermans & Hermans-Konopka, 2010; Hermans & Gieser, 2012), it is precisely the forms of interaction and exchange with others and with the world that determine the course of the self's development. The volume hence addresses dialogical processes in human interaction from a psychological perspective, bringing together previously separate theoretical traditions about the 'self' and about 'dialogue' within the innovative framework of Dialogical Self Theory. The book is devoted to developmental questions, and so broaches one of the more difficult and challenging topics for models of a pluralist self: the question of how the dynamics of multiplicity emerge and change over time. This question is explored by addressing ontogenetic questions, directed at the emergence of the dialogical self in early infancy, as well as microgenetic questions, addressed to later developmental dynamics in adulthood. Additionally, development and change in a range of culture-specific settings and practices is also examined, including the practices of mothering, of migration and cross-cultural assimilation, and of 'doing psychotherapy'. Here is the first comprehensive cross-disciplinary work to examine the current health situation of our immigrants, successfully integrating the vast literature of diverse fields -- epidemiology, health services research, anthropology, law, medicine, social work, health promotion, and bioethics -- to explore the richness and diversity of the immigrant population from a culturally-sensitive perspective. This unequalled resource examines methodological issues, issues in clinical care and research, health and disease in specific immigrant populations, patterns of specific diseases in immigrant groups in the US, and conclusive insight towards the future. Complete with 73 illustrations, this singular book is the blueprint for where we must go in the future. This mixed methods study examined the influences of acculturation (e.g., assimilation and enculturation), marianismo, and ethnic identity on the sexual behaviors and attitudes of Latina adolescents. In the quantitative portion of the study, 204 Latina adolescents completed measures regarding acculturation, gender roles, ethnic identity, and sexual behaviors. In the qualitative portion of the study, three focus groups were conducted (with a total of 10 participants) in which Latina youth were asked questions regarding their ethnic group membership and its influence on their attitudes about sex. The results of the quantitative portion of the study revealed that ethnic affirmation was negatively associated with the variable "ever had sex." Ethnic affirmation was positively associated with contraception use at first sexual intercourse and ethnic identity achievement was positively associated with age of first sexual intercourse. Additionally, there was a significant interaction between ethnic affirmation and assimilation for age at first sexual intercourse, such that participants who reported high levels of assimilation and low levels of ethnic affirmation reported a younger age of first sexual intercourse than those who reported a high level of assimilation and a high level of ethnic affirmation. The qualitative results revealed that the participants live in a cultural context characterized by ethnic pride and biculturalism. Experiences of discrimination, awareness of negative stereotypes, and bicultural difficulties are also important aspects of the cultural context of the Latina youth. The cultural context of these adolescents helped to shape their sexual attitudes. The core sexual attitude expressed by the majority of the Latina youth was that marriage is a necessary condition for them to engage in sexual activity. The qualitative results also revealed how gender roles, cultural differences, family values, personal knowledge, peer pressure, and stressors/abuse shape the core sexual attitude of the Latina adolescents. Specifically gender roles, cultural differences, family values, and personal knowledge discouraged them from engaging in sexual activity, while peer pressure and stressors/abuse

encouraged them to engage in sexual activity. Convergence and divergence between the qualitative and quantitative data are identified and explained. Limitations and implications of the current study and future directions are also discussed. *Understanding Cross-Cultural Neuropsychology* thoroughly examines the meaning of culture in the context of neuropsychology, focusing on the fundamental neuroscience underlying how different aspects of culture influence neuropsychological test performance, and how that is related to brain function. It explores in detail the relationship between brain activity and culture, and the influence of various cultural, educational, and linguistic factors on neuropsychological test performances across various cognitive domains. Written by leading researchers in cross-cultural neuropsychology, the book first introduces the basic concepts in the field. It goes on to focus on the influence of cultural variables on specific domains of cognition, including perception, attention, memory, language, and executive functions. It also explores the implications of cross-cultural neuropsychology in practice, including a focus on test adaptation, the use of interpreters, the influence of acculturation, and the practice of neuropsychological rehabilitation in different cultural settings. This book is essential reading for neuropsychologists and related practitioners working with culturally diverse clients, who need a good grasp of the cultural impacts on neuropsychological test performance when assessing clients from different cultural, linguistic, and educational backgrounds. It is also valuable for neuropsychologists in countries around the world who need a means of understanding the ways in which their culture impacts the performances of their clients on tests, which have been mostly developed in the U.S. or other Western cultures. *The Oxford Handbook of Acculturation and Health* expertly brings together two very distinct, but complementary, streams of work and thought: theoretical and methodological work on acculturation, and the applied work linking acculturation to various health outcomes among international migrants and their families. In this important volume, the work of landmark acculturation theorists and methodologists come together to showcase applied epidemiologic and intervention work on the issues facing acculturation and public health today. Edited by Seth J. Schwartz and Jennifer B. Unger, this Handbook is divided into two important parts for readers. Part one features chapters that are dedicated to theoretical and methodological work on acculturation, including definitional issues, measurement issues, and procedures for studying acculturation across immigrant groups and national contexts. The second part focuses on the links between acculturation and various health outcomes, such as obesity, physical activity, drug and alcohol abuse, mental health, delinquency, and suicide. Notably, because a majority of the research on acculturation and health has been conducted on Hispanic immigration, this volume contextualizes that research and offers readers compelling insight for how to apply these principles to other immigrant groups in the United States and around the world. This open access book engages with the response-ability of science education to Indigenous ways-of-living-with-Nature. Higgins deconstructs the ways in which the structures of science education—its concepts, categories, policies, and practices—contribute to the exclusion (or problematic inclusion) of Indigenous science while also shaping its ability to respond. Herein, he undertakes an unsettling homework to address the ways in which settler colonial logics linger and lurk within sedimented and stratified knowledge-practices, turning the gaze back onto science education. This homework critically inhabits culture, theory, ontology, and history as they relate to the multicultural science education debate, a central curricular location that acts as both a potential entry point and problematic gatekeeping device, in order to (re)open the space of responsiveness towards Indigenous ways-of-knowing-in-being. Praise for the First Edition: "This is an excellent book, but the best parts are the stories of the disabled, which give readers insights into their struggles and triumphs." Score: 94, 4 Stars--Doody's Medical Reviews What are the differences between individuals with disabilities who flourish as opposed to those who never really adjust after a trauma? How do those born with a disability differ from individuals who acquire one later in life? Fully updated and revised, this second edition of a unique rehabilitation counseling text reflects growing disparities among "haves and have-nots" as they bear on the psychosocial aspects of disability. New content focuses on returning veterans afflicted with physical and mental health problems, persons with disabilities living in poverty, and the need for increased family and community-based engagement. The book provides updated information about assisted suicide, genetic testing, new legislation, and much more. Using a minority model perspective, the text provides students and practitioners of rehabilitation and mental health counseling with vivid insight into the experience of living with a disability. It features first-person narratives from people living with a variety of disabling conditions, which are integrated with sociological and

societal perspectives toward disability, and strategies for counseling such individuals. The text encompasses an historical perspective, psychological and sociological research, cultural variants regarding disability, myths and misconceptions, the attitudes of special interest and occupational groups, the use positive psychology, and adjustments to disability by the individual and family. A wealth of counseling guidelines and useful strategies are geared to individuals with specific disabilities. Designed for a 15-week semester, the book also includes thought-provoking discussion questions and exercises, an Instructor's Manual and PowerPoints. New to the Second Edition: Reflects the growing disparities between "haves and have-nots" as they impact people with disabilities Includes new content on veterans with physical and mental disabilities Describes the experience of impoverished individuals with disabilities Examines the need for increase family and community-based engagement Discusses strengths and weaknesses of the Americans with Disabilities Act Covers assisted suicide, genetic testing, and recent legislation Expanded coverage of sexual identity Provides an Instructor Manual and PowerPoints Key Features: Provides 16 personal narratives demonstrating the "normalcy" of individuals with different types of disabling conditions Includes stories of people living with blindness, hearing impairments, spinal chord injuries, muscular dystrophy, mental illness, and other disabilities Delivers counseling strategies geared toward specific disabilities, with "do's" and "don'ts" Discusses ongoing treatment issues and ethical dilemmas for rehabilitation counselors This handbook deals with the question of how people can best live and work with others who come from very different cultural backgrounds. Handbook of Intercultural Training provides an overview of current trends and issues in the field of intercultural training. Contributors represent a wide range of disciplines including psychology, interpersonal communication, human resource management, international management, anthropology, social work, and education. Twenty-four chapters, all new to this edition, cover an array of topics including training for specific contexts, instrumentation and methods, and training design. Print+CourseSmart This book is about strategic thinking in Hispanic marketing. The size and economic importance of the Hispanic market in the US are attracting enormous attention. The buying power of the US Hispanic market is now larger than the GDP of the entire country of Mexico, and it is the second largest Hispanic market in the world. Businesses and institutions have launched major initiatives to reach this important segment. Yet, the number of qualified individuals who understand the market is small; and many of those already catering to the market still struggle to learn about its intricacies. This book is a cultural approach to Hispanic marketing. Each of the chapters describes and explains the cultural principles of Latino marketing. Recent case studies help marketers relate to the material pragmatically. The book integrates concepts and practical examples and provides critical guidance to discern between alternative courses of action. This book is not about repeating well-known statistics, but about the Hispanic market as a cultural target. It takes a profound look at the values, beliefs, and emotions of US Hispanics, which impact consumer behaviour. Each of the chapters has been the subject of public presentations and lectures to marketing professionals. It is their positive reactions as well as the authors' dedication to Hispanic consumers which motivated this book. Chapter 1: The Role of Culture in Cross-Cultural Marketing Chapter 2: Characteristics of the Hispanic Market Chapter 3: What Makes Hispanics "Hispanic" Chapter 4: The Role of Language in Hispanic Marketing Chapter 5: The Processes of Enculturation, Acculturation, and Assimilation Chapter 6 Cultural Dimensions and Archetypes Chapter 7: Culturally Informed Strategy Based on Grounded Research Chapter 8: US. Hispanic Media Environment and Strategy Chapter 9: The Evolution of Hispanic Marketing Chapter 10: The Future How do athletes overcome fears, slumps, mental blocks, or injuries? How do they deal with stress and anxiety, be it from competitors, teammates, audiences, parents, coaches, or themselves? What psychological techniques prove effective in mental training for peak performance, maintaining concentration, motivation, and competitive drive? How can an athlete enhance his or her commitment to a training regimen, or how might the average person better adhere to a program of fitness and exercise? Readers will find answers to these questions and more in the Encyclopedia of Sport and Exercise Psychology. Features & Benefits: Entries explore the theory, research, and application of psychology as it relates to sport and fitness in a manner that is accessible and jargon-free to help readers better understand human behavior in sport and exercise settings. From personal factors to situational factors influencing performance to specific psychological techniques for enhancing performance, this work provides comprehensive coverage of the field via approximately 350 to 400 signed entries. Entries conclude with cross-references and suggestions for further readings to guide students further in their research

journey. Available in print and online, this monumental work is edited by two leading figures in the field with a distinguished international Editorial Advisory Board to select and assign entries, ensuring authoritative content readers can trust. Key Themes: Career Transition Certification, Credentialing, and Roles of Sport and Exercise Psychologists Disability Emotion Exercise Health Group Dynamics History and Foundation Leadership Morality, Aggression, and Ethics in Sport Motivation Motor Control Perception and Cognition in Sport Personality and Psychological Characteristics in Sport Psychobiology Psychological Skills/Interventions Psychosociocultural Self-Concept/Self-Perceptions, and Identity Youth Sport Offering fresh and exciting approaches to solving global problems, this book creatively views challenging social issues through the lens of racial and ethnic psychology. • Utilizes concepts of racial and ethnic minority psychology to address important issues of the 21st century, offering unique insights into the nature of today's real-world problems • Presents racial and ethnic psychological perspectives on topics such as media, the criminal justice system, sexual orientation, poverty, climate change, and sustainability • Provides much-needed alternative perspectives on human behavior other than the theories, systems, and practices that are largely derived from Anglo-American research using white subjects This book provides comprehensive coverage of cross-cultural issues and behavior in tourism, and illustrates how international cultural differences influence travel decision-making --publisher's description. The Encyclopedia of Adolescence breaks new ground as an important central resource for the study of adolescence. Comprehensive in breadth and textbook in depth, the Encyclopedia of Adolescence - with entries presented in easy-to-access A to Z format - serves as a reference repository of knowledge in the field as well as a frequently updated conduit of new knowledge long before such information trickles down from research to standard textbooks. By making full use of Springer's print and online flexibility, the Encyclopedia is at the forefront of efforts to advance the field by pushing and creating new boundaries and areas of study that further our understanding of adolescents and their place in society. Substantively, the Encyclopedia draws from four major areas of research relating to adolescence. The first broad area includes research relating to "Self, Identity and Development in Adolescence". This area covers research relating to identity, from early adolescence through emerging adulthood; basic aspects of development (e.g., biological, cognitive, social); and foundational developmental theories. In addition, this area focuses on various types of identity: gender, sexual, civic, moral, political, racial, spiritual, religious, and so forth. The second broad area centers on "Adolescents' Social and Personal Relationships". This area of research examines the nature and influence of a variety of important relationships, including family, peer, friends, sexual and romantic as well as significant nonparental adults. The third area examines "Adolescents in Social Institutions". This area of research centers on the influence and nature of important institutions that serve as the socializing contexts for adolescents. These major institutions include schools, religious groups, justice systems, medical fields, cultural contexts, media, legal systems, economic structures, and youth organizations. "Adolescent Mental Health" constitutes the last major area of research. This broad area of research focuses on the wide variety of human thoughts, actions, and behaviors relating to mental health, from psychopathology to thriving. Major topic examples include deviance, violence, crime, pathology (DSM), normalcy, risk, victimization, disabilities, flow, and positive youth development. Mexican-Americans now constitute two thirds of what has become the largest and fastest-growing minority group in the United States, Hispanics. They have distinct cultural patterns and values that those who seek to serve them competently as clinicians and educators, and those who attempt to study them, need to understand. This is the first comprehensive overview of the psychology of the Chicana/o experience since 1984. Solidly grounded in the latest theory and research, much of which is relevant to other Latina/o groups as well, The Handbook of Chicana/o Psychology and Mental Health is an indispensable source of up-to-date information and guidance for mental health and education professionals, their trainees and students; and for social and behavioral scientists interested in the impact of cultural differences in multicultural settings. Preceded by Culture care diversity and universality: a worldwide nursing theory / [edited by] Madeleine M. Leininger, Marilyn R. McFarland. 2nd ed. c2006. The first volume of its kind, this provocative book evaluates the construct of cultural competence from multiple perspectives. At the intersection of diverse disciplines and domains, contributors argue for greater clarity in understanding the cultural competence construct, a deeper level of analysis as to its multifaceted components, and call for concrete practical objectives and science-based means of measurement. Serious, nuanced discussion addresses challenges, strengths, and limitations of current cultural competence practice in terms of sociocultural concepts (e.g.,

race, ethnicity) and practical concepts (e.g., sensitivity in the therapeutic relationship, treatment efficacy). In addition, contributors identify future directions for research, training, and practice with the potential to spur the further evolution of this clinically important construct. This timely book: Critiques the cultural competence construct and its evaluation as it is currently disseminated within applied psychology. Compares and contrasts how cultural competence is defined within clinical, school, and counseling psychology. Analyzes difficulties and challenges in understanding the cultural competence construct as evaluated through the lens of closely related fields outside of applied psychology. Spotlights complexities in cultural competence issues pertaining to specific populations. Sets out implications for education and training, offering a detailed outline for an ideal college course in cultural competence With this level of reasoning and rigor, Cultural Competence in Applied Psychology is sure to stimulate long-overdue dialogue and debate among professionals across a wide variety of fields, such as clinical psychology, social work, child and social psychology, psychotherapy, school psychology, and counseling. What is intercultural communication? How does perspective shape a person's definition of the key tenets of the term and the field? These are the core questions explored by this accessible global introduction to intercultural communication. Each chapter explores the topic from a different geographic, religious, theoretical, and/or methodological perspective, with an emphasis on non-Western approaches, including Buddhist, South American, Muslim, and Chinese perspectives. Featuring the voices of a range of international contributors, this new textbook presents the full breadth of diverse approaches to intercultural communication and showcases the economic, political, and cultural/societal needs for and benefits of communicative competence. Beginning with a comprehensive definition and demographic map of Latinos, Latino culture, and a cultural asset paradigm, this book identifies strategies for designing culturally relevant programs and services. This book studies Korean American girls between thirteen and nineteen and their formation with regard to self, gender, and God in the context of Korean American protestant congregational life. It develops a hybrid methodology of de-colonial aims and indigenous research methods, aiming to facilitate transformative life in faith communities.
