SITTER manual. The KILN-SITTER is a mechanical control that fires your kiln by the TIME and TEMPERATURE method of heat treatment using a small cone or bar. The cone or bar, after being exposed to the proper time and temperature, softens and bends to a pre-determined angle, shutting off the kiln. Your choice of cone or bar, proper KILN- SITTER adjustment and tube ...

The user places the thermocouple through a hole in the kiln brick so that it rests inside the kiln. What is a Kiln Sitter? The kiln sitter is a mechanical device used in ceramics to insure the kiln is shut off at the correct time. Pyrometers don't work well with ceramic projects, because you need to know the "heat work" (temperature and timing) inside the kiln for proper firing. If an

Traditionally, the bricks in the hot zone of the kiln near the flame are composed of 70% alumina in order to resist the high temperatures and chemical attack in this region. About one-third of the way up the length of the kiln, this is changed to 40% alumina bricks, which have better insulating characteristics. Finally, a castable low-temperature refractory is used in the chain section at the
