16.09.2016 - Wound measurements as part of wound description: 1. The wounds should be numbered when more than one wound is observed and described. 2. Each wound should have measurements of length, width, depth in centimeters. Wound measurements as part of op note for debridement: 1. The wound measurements should be given both pre- procedure and post ...

22.09.2016 - Wound #1 - 25 x 39.5 = 987.5 sq cm Wound #2 - 22 x 39 = 858 sq cm If subcutaneous tissue was debried for both wounds you would add the two together to get a total debridement of 1845.5 sq cm. This would then be coded as 11042, 11045 (x92) This is an extremely large wound debridement. There is a CMS MUE of 4 (or 5, I can't remember for sure).

30.01.2020 - Wound care is an ongoing challenge for home care, given the complexity of wound care in addition to the many factors affecting healing. Appropriate assessment and care plans are essential to prevent or effectively treat wounds. The management of this patient population is therefore critical in both clinical and business terms, as the mismanagement of [...]
