Locate your place in the exciting field of GIS In existence since 1962, Geographical Information Systems (GIS) are really coming into their own today. And not just in your car's GPS system or your cell phone's tracking capabilities. GIS is finding applications throughout science, government, business, and industry, from regional and community planning, architecture, and transportation to public health, crime mapping, and national defense. Michael DeMers's Fundamentals of Geographic Information, Fourth Edition

brings an already essential text up to date, capturing the significant developments in the field and responding to the needs of a diverse set of readers, from geographers to students in a host of other fields. If you are a non-geographer or new to GIS, get a quick introduction to the "lay of the land" of GIS through the new "Spatial Learner's Permit" section. Then join in the excitement of discovery with GIS databases as you absorb the such concepts and skills as digital geographic data and maps, GIS data models, spatial analysis, measurement and classification, cartographic modeling, and GIS design. Responding to both the needs and technical skills of today's students, this Fourth Edition: *

- * Makes concepts accessible to students from a wide range of backgrounds
- * Offers more practical and relevant coverage of GIS design and implementation
- * Reflects the latest changes in GIS applications
- * Examines in greater depth the underlying computer science behind GIS
- * Uncovers the most recent developments on GIS research
- * Expands coverage of the increasingly robust literature on cartographic visualization
- * Includes Web-based labs and links to current and updated dataset resources

Taking an open-ended, hands-on approach that gets you to ask your own questions about the underlying concepts, the Fourth Edition helps you not only master the basics but acquire the active problem-solving skills that are a key component of success in the GIS industry.

There are many books about teaching in Geography, but this is the first dealing specifically with Pedagogic Research, its methods and practices. Pedagogy research concerns the processes of learning and the development of learners. It is a learner-centred activity that aims to evaluate and improve the ways that students learn and learn to manage, control and comprehend their own learning processes, first as Geographers in Higher Education but equally as future educated citizens. This book collects together some key research papers from the Journal of Geography in Higher Education. They concern original research and critical

perspectives on how Geographers learn, critical evaluations of both new and traditional frameworks and methods used for Pedagogic research in Geography, and some case studies on the promotion of self-authorship, learner autonomy, in key Geography Higher Education contexts such as fieldwork and undergraduate project work. This book is a compilation of articles from various issues of the Journal of Geography in Higher Education.
