### Planning Programs for Adult Learners

### Mastering the Instructional Design Process

The purpose of this book is to provide a superstructure within which one can design effective and efficient instruction, a system in which predictable and validatable learning will occur, a system in which one will be able to direct the learner's activities toward a mutual goal in an environment of positive relationships. The purpose of this chapter is to provide an over view of the field of instructional technology, with specific focus on instructional design. The overview is eclectic; it presents views commonly held by instructional designers that have been synthesized from the research and literature. This book differs from most books on instructional design in that it describes a process that is internally consistent; that is, it embraces a specific approach which makes it possible and easier for the designer to achieve closure on a process. Most books on instructional design describe several processes without adequately providing an opportunity for closure. As a result, many designers go away confused, owning bits and pieces of a process that it is impossible, or at least difficult, to implement in a coherent fashion.

### **Instructional Design for Learning**

### **Task Analysis**

This book is the result of a research symposium sponsored by the Association for Educational Communications and Technology [AECT]. The fifteen chapters were developed by leaders in the field and represent the most updated and cutting edge methodology in the areas of instructional design and instructional technology. The broad concepts of design, design thinking, the design process, and the design studio, are identified and they form the framework of the book. This book advocates the conscious adoption of a mindset of design thinking, such as that evident in a range of divergent professions including business, government, and medicine. At its core is a focus on “planning, inventing, making, and doing.” (Cross, 1982), all of which are of value to the field of educational technology. Additionally, the book endeavors to develop a deep understanding of the design process in the reader. It is a critical skill, often drawing from other traditional design fields. An examination of the design process as practiced, of new models for design, and of ways to connect theory to the development of educational products are all fully explored with the goal of providing guidance for emerging instructional designers and deepening the practice of more advanced practitioners. Finally, as a large number of leading schools of instructional design have adopted the studio form of education for their professional programs, we include this emerging topic in the book as a practical and focused guide for readers at all levels.
