Many policy makers seem to think that teachers/schools are the primary cause of low achievement. Educational institutions still cannot solve a non-education-caused problem and haven't done so for over fifty years despite all the public and private money that has been allocated. The book concludes with suggested policies for addressing the damage to public education from "gap-closing" standards and with suggested areas for policy making in order to change the current course of failure for many low-achieving students.Teaches the attitudes and competencies necessary for success at work.The inquiry-based lessons and related extension activities can serve as the framework for professional development collaborations or as a supplement to conventional preservice science teaching methods courses.MATHEMATICAL EXCURSIONS, Third Edition, teaches students that mathematics is a system of knowing and understanding our surroundings.
