Principles and Practice of Radiation Therapy - E-Book

In Mendel's Mirror This book comprehensively addresses the physical and engineering aspects of human physiology by using and building on first-year college physics and mathematics. It is the most comprehensive book on the physics of the human body, and the only book also providing theoretical background. The book is geared to undergraduates interested in physics, medical applications of physics, quantitative physiology, medicine, and biomedical engineering.

Catalog of Copyright Entries. Third Series This innovative textbook provides a concise and accessible guide for undergraduate students specializing in children and young people's nursing in the UK and further afield. Each chapter has been fully updated to reflect current knowledge and practice. The wide range of topics covered includes all the essentials, such as contemporary child health policy and legal issues; knowledge and skills for practice; and caring for children with special needs. Students will learn how to recognize the deteriorating child, use procedural play and distraction, and consider the mental health of children and young people. A Textbook of Children's and Young People's Nursing is written by multidisciplinary experts, rooted in child-centred healthcare within a family context, and draws upon best contemporary practice. It is an invaluable resource that will help nursing students provide effective, evidence-based care. Key points, summary boxes and clearly defined aims, objectives and learning outcomes to support learning Conversation boxes to enliven the text Patient scenarios to relate theory to practice New chapters on skin health and the use of therapeutic play Suggestions for seminar discussion topics to help teachers Resource lists and online resources for further study or research Online slides to complement chapters within book

New Scientist "This book describes the physics of water flow into and out of lake systems, explaining the physical parameters that influence lake behavior and the mathematics that describes these systems. This book is aimed at working professionals, graduate and advanced undergraduate students of limnology, and researchers involved in lake management, lake remediation, or investigation of lake systems"--

Maternal-Child Nursing - E-Book Author Richard A. Schaefer is a

lifelong communicator, fascinated by stories and, like any good journalist, digs for the facts and verifies sources, exploring nagging questions such as "Is creation or evolution more credible, based on science and expert opinions?" This book truly represents a personal passion of looking at all sides of the CREATION vs. EVOLUTION issue. He has called on many experts and theorists—including Charles Darwin himself. Surprisingly, Darwin was far more skeptical of his own theories than are many PhDs today, and admitted to significant holes in his logic. Read for yourself, as great thinkers explore the pros and cons of both theories and their variants.

New Scientist New Scientist magazine was launched in 1956 "for all those men and women who are interested in scientific discovery, and in its industrial, commercial and social consequences". The brand's mission is no different today - for its consumers, New Scientist reports, explores and interprets the results of human endeavour set in the context of society and culture.

Who's who Among African Americans

Pattern Recognition in Computational Molecular Biology With easy-to-read, in-depth descriptions of disease, disease etiology, and disease processes, Pathophysiology: The Biologic Basis for Disease in Adults and Children, 7th Edition helps you understand the most important and the most complex pathophysiology concepts. More than 1,200 full-color illustrations and photographs make it easier to identify normal anatomy and physiology, as well as alterations of function. This edition includes a NEW Epigenetics and Disease chapter along with additional What's New boxes highlighting the latest advances in pathophysiology. Written by well-known educators Kathryn McCance and Sue Huether, and joined by a team of expert contributors, this resource is the most comprehensive and authoritative pathophysiology text available! Over 1,200 full-color illustrations and photographs depict the clinical manifestations of disease and disease processes - more than in any other pathophysiology text. A fully updated glossary includes 1,000 terms, and makes lookup easier by grouping together similar topics and terms. Outstanding authors Kathryn McCance and Sue Huether have extensive backgrounds as researchers and instructors, and utilize expert contributors, consultants, and reviewers in developing this edition. Chapter summary reviews provide concise synopses of the

main points of each chapter. Consistent presentation of diseases includes pathophysiology, clinical manifestations, and evaluation and treatment. Lifespan content includes ten separate pediatric chapters and special sections with aging and pediatrics content. Algorithms and flowcharts of diseases and disorders make it easy to follow the sequential progression of disease processes. Nutrition and Disease boxes explain the link between concepts of health promotion and disease. EXTENSIVELY Updated content reflects advances in pathophysiology including tumor biology invasion and metastases, the epidemiology of cancer, diabetes mellitus, insulin resistance, thyroid and adrenal gland disorders, female reproductive disorders including benign breast diseases and breast cancer, and a separate chapter on male reproductive disorders and cancer. NEW! Chapter on epigenetics and disease. Additional What's New boxes highlight the most current research and clinical development.

Creation: "Behold, it was very good." Corresponding to the chapters in Essentials for Nursing Practice, 9th Edition, Study Guide for Essentials for Nursing Practice reinforces your understanding of key nursing ideas. Each chapter includes a Preliminary Reading, Case Study questions, a Chapter Review, Study Group Questions, and directions to help you create your own personalized Study Chart for the chapter. In addition, each Chapter Review includes many different kinds of questions to keep learning the material interactive and fun! Answers and rationales included on the Essentials for Nursing Practice Evolve Each chapter includes a case study with related questions allowing students to apply what they've learned. Chapter review questions include matching, short answer, multiple choice, and true/false questions provide students with evaluation and test-taking practice. Study group questions make it easier for students to review material with their peers site. Skills performance checklists help you measure your mastery of important nursing procedures. Study charts in select chapters helps provide focus and structure for students reviewing the material and key concepts. NEW! Content completely updated to match Nursing Essentials 9th Edition. NEW! Chapter on Complementary and Alternative Therapies, addresses content that is now included on the NCLEX® exam. NEW! Preliminary Readings sections provide you with an easy reference point to the related text chapter.

Principles and Practice of Sleep Medicine E-Book Widely regarded as the definitive reference in the field, Youmans and Winn Neurological Surgery offers unparalleled, multimedia coverage of the entirety of this complex specialty. Fully updated to reflect recent advances in

the basic and clinical neurosciences, the 8th Edition covers everything you need to know about functional and restorative neurosurgery, deep brain stimulation, stem cell biology, radiological and nuclear imaging, and neuro-oncology, as well as minimally invasive surgeries in spine and peripheral nerve surgery, and endoscopic and other approaches for cranial procedures and cerebrovascular diseases. In four comprehensive volumes, Dr. H. Richard Winn and his expert team of editors and authors provide updated content, a significantly expanded video library, and hundreds of new video lectures that help you master new procedures, new technologies, and essential anatomic knowledge in neurosurgery. Discusses current topics such as diffusion tensor imaging, brain and spine robotic surgery, augmented reality as an aid in neurosurgery, AI and big data in neurosurgery, and neuroimaging in stereotactic functional neurosurgery. 55 new chapters provide cutting-edge information on Surgical Anatomy of the Spine, Precision Medicine in Neurosurgery, The Geriatric Patient, Neuroanesthesia During Pregnancy, Laser Interstitial Thermal Therapy for Epilepsy, Fetal Surgery for Myelomeningocele, Rehabilitation of Acute Spinal Cord Injury, Surgical Considerations for Patients with Polytrauma, Endovascular Approaches to Intracranial Aneurysms, and much more. Hundreds of all-new video lectures clarify key concepts in techniques, cases, and surgical management and evaluation. Notable lecture videos include multiple videos on Thalamotomy for Focal Hand Dystonia and a video to accompany a new chapter on the Basic Science of Brain Metastases. An extensive video library contains stunning anatomy videos and videos demonstrating intraoperative procedures with more than 800 videos in all. Each clinical section contains chapters on technology specific to a clinical area. Each section contains a chapter providing an overview from experienced Section Editors, including a report on ongoing controversies within that subspecialty.

Magill's Survey of Science: A-Central and peripheral nervous system functions Popular Science gives our readers the information and tools to improve their technology and their world. The core belief that Popular Science and our readers share: The future is going to be better, and science and technology are the driving forces that will help make it better.

Cincinnati Magazine The only radiation therapy text written by radiation therapists, Principles and Practice of Radiation Therapy, 4th Edition helps you understand cancer management and improve clinical techniques for delivering doses of radiation. A problem-

based approach makes it easy to apply principles to treatment planning and delivery. New to this edition are updates on current equipment, procedures, and treatment planning. Written by radiation therapy experts Charles Washington and Dennis Leaver, this comprehensive text will be useful throughout your radiation therapy courses and beyond. Comprehensive coverage of radiation therapy includes a clear introduction and overview plus complete information on physics, simulation, and treatment planning. Spotlights and shaded boxes identify the most important concepts. End-of-chapter questions provide a useful review. Chapter objectives, key terms, outlines, and summaries make it easier to prioritize, understand, and retain key information. Key terms are bolded and defined at first mention in the text, and included in the glossary for easy reference. UPDATED chemotherapy section, expansion of What Causes Cancer, and inclusions of additional cancer biology terms and principles provide the essential information needed for clinical success. UPDATED coverage of post-image manipulation techniques includes new material on Cone beam utilization, MR imaging, image guided therapy, and kV imaging. NEW section on radiation safety and misadministration of treatment beams addresses the most up-to-date practice requirements. Content updates also include new ASRT Practice Standards and AHA Patient Care Partnership Standards, keeping you current with practice requirements. UPDATED full-color insert is expanded to 32 pages, and displays images from newer modalities.

Book Review Digest The next generation of oncological hyperthermia involves the medical innovation of selectively heating up the malignant cells of the body in a controlled way. The easily-distinguishable biophysical and physiological characteristics of cancer cells and their immediate environment are the focus of the targeted energy delivery of this treatment. This heterogenic heating concept breaks with the homogeneous nature of conventional hyperthermia, where an isothermally equal temperature is applied to the large surface area of a solid tumor. Due to its selectivity, the new concept enables the usage of a significantly lower energy, making it safer, less toxic, and easier to use. This book shows the challenges facing oncological hyperthermia, and highlights clinical results obtained in various countries. It also presents discussions about the theoretical basis of the method, adding some technical discussions and clarifying the most difficult points of its design. The contributions dealing with clinical results use state-of-art conventional therapies with complementary hyperthermia and show the advantages of such a combination.

Challenges and Solutions of Oncological Hyperthermia Inorganic Chemistry "Catherine E. Housecroft and Alan G. Sharpe" This book has established itself as a leading textbook in the subject by offering a fresh and exciting approach to the teaching of modern inorganic chemistry. It gives a clear introduction to key principles with strong coverage of descriptive chemistry of the elements. Special selected topics chapters are included, covering inorganic kinetics and mechanism, catalysis, solid state chemistry and bioinorganic chemistry. A new full-colour text design and three-dimensional illustrations bring inorganic chemistry to life. Topic boxes have been used extensively throughout the book to relate the chemistry described in the text to everyday life, the chemical industry, environmental issues and legislation, and natural resources. Teaching aids throughout the text have been carefully designed to help students learn effectively. The many worked examples take students through each calculation or exercise step by step, and are followed by related self-study exercises tackling similar problems with answers to help develop their confidence. In addition, end-of-chapter problems reinforce learning and develop subject knowledge and skills. Definitions boxes and end-of-chapter checklists provide excellent revision aids, while further reading suggestions, from topical articles to recent literature papers, will encourage students to explore topics in more depth. New to this edition Many more self-study exercises have been introduced throughout the book with the aim of making stronger connections between descriptive chemistry and underlying principles. Additional 'overview problems' have been added to the end-of-chapter problem sets. The descriptive chemistry has been updated, with many new results from the literature being included. Chapter 4 Bonding in polyatomic molecules, has been rewritten with greater emphasis on the use of group theory for the derivation of ligand group orbitals and orbital symmetry labels. There is more coverage of supercritical fluids and 'green' chemistry. The new full-colour text design enhances the presentation of the many molecular structures and 3-D images. Supporting this edition Companion website featuring multiple-choice questions and rotatable 3-D molecular structures, available at "[www.reasoned.co.uk/housecroft](http://www.reasoned.co.uk/housecroft)," For full information, including details of lecturer material, see the Contents list inside the book. A Solutions Manual, written by Catherine E. Housecroft, with detailed solutions to all end-of-chapter problems within the text is available for purchase separately ISBN 0131 39926 8. "Catherine E. Housecroft" is Professor of Chemistry at the University of Basel, Switzerland. She is the author of a number of textbooks and has extensive teaching experience in the UK, Switzerland, South Africa

and the USA. "Alan G. Sharpe" is a Fellow of Jesus College, University of Cambridge, UK and has had many years of experience teaching inorganic chemistry to undergraduates

Computing Newsletter for Schools of Business Philip Kitcher is one of the leading figures in the philosophy of science today. Here he collects, for the first time, many of his published articles on the philosophy of biology, spanning from the mid-1980's to the present. The book's title refers to Gregor Mendel, an Augustinian monk who was one of the first scientists to develop a theory of heredity. Mendel's work has been deeply influential to our understanding of our selves and our world, just as the study of genetics today will have a profound and long-term impact on future scientific research. Kitcher's articles cover a broad range of topics with similar philosophical and social significance: sociobiology, evolutionary psychology, species, race, altruism, genetic determinism, and the rebirth of creationism in Intelligent Design. Kitcher's work on the intersection of biology and the philosophy of science is both unprecedented and wide-ranging, and will appeal not only to philosophers of science, but to scholars and students across disciplines.

A Textbook of Children's and Young People's Nursing - E-Book Dermatology, edited by world authorities Jean L. Bologna, MD, Joseph L. Jorizzo, MD, and Julie V. Schaffer, MD, is an all-encompassing medical reference book that puts the latest practices in dermatologic diagnosis and treatment at your fingertips. It delivers more comprehensive coverage of basic science, clinical practice, pediatric dermatology, and dermatologic surgery than you'll find in any other source. Whether you're a resident or an experienced practitioner, you'll have the in-depth, expert, up-to-the-minute answers you need to overcome any challenge you face in practice. Find answers fast with a highly user-friendly, "easy-in-easy-out" format and a wealth of tables and algorithms for instant visual comprehension. Get full exposure to core knowledge with coverage of dermatology's entire spectrum of subspecialties. See just the essential information with "need-to-know" basic science information and key references. Expedite decision making and clarify complex concepts with logical tables, digestible artwork, and easy-to-grasp schematics. Visualize more of the conditions you see in practice with over 3500 illustrations, of which over 1,400 are new: 1,039 clinical images, 398 pathology slides, and 152 schematics.

Stay at the forefront of your field with updated treatment methods throughout, as well as an increased focus on patients with skin of color. Get an enhanced understanding of the foundations of dermatology in pathology, the clinical setting, and dermoscopy with a completely rewritten introductory chapter. Better comprehend the clinical-pathological relationship of skin disease with increased histologic coverage. Bologna's Dermatology is the ultimate multimedia reference for residents in training AND the experienced practitioner.

Environmental Science Principles and Practice of Sleep Medicine, 5th Edition, by Meir H. Kryger, MD, FRCPC, Thomas Roth, PhD, and William C. Dement, MD, PhD, delivers the comprehensive, dependable guidance you need to effectively diagnose and manage even the most challenging sleep disorders. Updates to genetics and circadian rhythms, occupational health, sleep in older people, memory and sleep, physical examination of the patient, comorbid insomnias, and much more keep you current on the newest areas of the field. A greater emphasis on evidence-based approaches helps you make the most well-informed clinical decisions. And, a new more user-friendly, full-color format, both in print and online, lets you find the answers you need more quickly and easily. Whether you are preparing for the new sleep medicine fellowship examination, or simply want to offer your patients today's best care, this is the one resource to use! Make optimal use of the newest scientific discoveries and clinical approaches that are advancing the diagnosis and management of sleep disorders.

Oxygen in the Animal Organism The Tenth Edition helps you develop a deeper understanding of biology by making connections visually across chapters and building the scientific skills needed for success in upper-level courses. New Make Connections Figures pull together content from different chapters visually, helping you see "big picture" relationships. New Scientific Skills Exercises in every chapter use real data to build key skills needed for biology, including data analysis, graphing, experimental design, and math skills. New Scientific Skills Exercises in every chapter use real data to build key skills needed for biology, including data analysis, graphing, experimental design, and math skills.

Dermatology E-Book A comprehensive overview of high-performance pattern recognition techniques and approaches to Computational Molecular Biology This book surveys the developments of techniques and approaches on pattern recognition related to Computational

Molecular Biology. Providing a broad coverage of the field, the authors cover fundamental and technical information on these techniques and approaches, as well as discussing their related problems. The text consists of twenty nine chapters, organized into seven parts: Pattern Recognition in Sequences, Pattern Recognition in Secondary Structures, Pattern Recognition in Tertiary Structures, Pattern Recognition in Quaternary Structures, Pattern Recognition in Microarrays, Pattern Recognition in Phylogenetic Trees, and Pattern Recognition in Biological Networks. Surveys the development of techniques and approaches on pattern recognition in biomolecular data Discusses pattern recognition in primary, secondary, tertiary and quaternary structures, as well as microarrays, phylogenetic trees and biological networks Includes case studies and examples to further illustrate the concepts discussed in the book Pattern Recognition in Computational Molecular Biology: Techniques and Approaches is a reference for practitioners and professional researches in Computer Science, Life Science, and Mathematics. This book also serves as a supplementary reading for graduate students and young researches interested in Computational Molecular Biology.

Lake Hydrology Easily master maternity and pediatric nursing care with Maternal-Child Nursing, 5th Edition. This easy-to-read text is filled with a wealth of user-friendly features to help you quickly master essential concepts and skills. It offers completely updated content – including expanded information on the late preterm infant, fetal heart rate pattern identification, obesity in the pregnant woman and children, and enhanced coverage of the QSEN initiative. It also features an abundance of active learning tools so you have ample opportunities to practice applying your knowledge and skills. Nursing care plans help you apply the nursing process to plan individualized care for the most common maternity and pediatric conditions. Critical to Remember boxes summarize and highlight essential, need-to-know information. Critical Thinking Exercises allow you to apply your knowledge to realistic clinical situations. Communication Cues provide practical tips for effective verbal and nonverbal communication with patients and families. Clinical Reference sections in pediatric chapters present information relevant to each body system, including anatomy and physiology, differences in the pediatric patient, and related laboratory and diagnostic tests. Safety Alerts call attention to important patient safety considerations for better outcomes of nursing care. Glossary at the end of the book offers quick access to all key terms and definitions presented in the text. Want to Know boxes provide teaching guidelines such as communication guides directed at

patients and families. Pathophysiology boxes present an illustrated overview of disorders. Updated drug guides summarize key medication information. NEW! Completely updated content includes expanded information on the late preterm infant, fetal heart rate pattern identification, obesity in the pregnant woman and children, and the QSEN initiative. UPDATED! Evidence-Based Practice boxes with newly researched topics offer the most current practice guidelines to promote quality care. UPDATED! Online resources offer the best interactive tools to learn in the most effective way possible. NEW! Improved consistency between maternity and pediatric sections makes it easier to switch from one area to the other for more efficient learning.

Forthcoming Books *Lean Higher Education: Increasing the Value and Performance of University Processes, Second Edition* (978-0-8153-7909-6, K339047) *Shelving Guide: Business and Management / Higher Education / Lean Implementation In an environment of diminishing resources, growing enrollment, and increasing expectations of accountability, Lean Higher Education: Increasing the Value and Performance of University Processes, Second Edition* provides the understanding and the tools required to return education to the consumers it was designed to serve - the students. It supplies a unifying framework for implementing and sustaining a Lean Higher Education (LHE) transformation at any institution, regardless of size or mission. Using straightforward language, relevant examples, and step-by-step guidelines for introducing Lean interventions, this authoritative resource explains how to involve stakeholders in the delivery of quality every step of the way. The author details a flexible series of steps to help ensure stakeholders understand all critical work processes. He presents a wealth of empirical evidence that highlights successful applications of Lean concepts at major universities and provides proven methods for uncovering and eliminating activities that overburden staff yet contribute little or no added value to stakeholders. Complete with standardized methods for correctly diagnosing workplace problems and implementing appropriate solutions, this valuable reference arms you with the understanding and the tools to effectively balance the needs of all stakeholders. By implementing the Lean practices covered in these pages, your school will be better positioned to provide higher quality education, at reduced costs, with efficient processes that instill pride, maximize value, and respect the long-term interests of your students, faculty, and staff. This second

edition contains a substantial update with expanded material and reflects the significant growth of LHE practices in colleges and universities worldwide. Because of advances in best practices, as well as some modest research-based evidence, this second edition includes many enhancements that provide particular value to LHE practitioners and higher education (HE) leaders. Since the initial publication of Lean Higher Education in 2010, the challenges of cost and affordability, competition for students and faculty, and calls for efficiency and accountability have only continued to grow, requiring colleges and universities to pursue more radical and transformative change to ensure their success. This new edition provides a model for change based on more than 50 years of application in business and industry and almost 20 years in HE. It provides the information and evidence demanded by HE leadership to understand and embrace LHE as well as best practices processes and tools for implementing LHE in targeted areas or institution-wide. This book provides a conceptual framework for redesigning any university process, such as admitting students, paying a bill, hiring faculty, or processing a donor gift, in a way that delights the beneficiary of that process, respects the employees who support the process, and reduce the cost of the process.

Magnetic Resonance Imaging Oxygen in the Animal Organism is a compilation of papers presented during the symposium on Oxygen in the Animal Organism, jointly sponsored by the International Union of Biochemistry and the International Union of Physiological Sciences, held at Bedford College, London in September 1963. The book provides a multidisciplinary approach to the study of the subject of oxygen in the animal organism. The papers presented cover a wide range of facts and hypotheses on the subject. Topics discussed include studies in the transport of oxygen; the fundamental physics and

chemistry of oxygen; the diffusion of oxygen from the capillaries to the mitochondria; the neural and humoral components to the regulation of ventilation; and the evolution of biochemical pathways for oxygen. Biologists, biochemists, biophysicists, physiologists, and researchers will find the text informative and insightful.

Physics of the Human Body Provide quality care for clients from culturally diverse backgrounds! Transcultural Nursing, 8th Edition shows you how to apply assessment and intervention strategies to individuals from a variety of different cultures. Based on Giger and Davidhizer's unique transcultural model, this text helps you design culturally sensitive care with use of the six key aspects of cultural assessment: communication, time, space, social organization, environmental control, and biologic variations. Written by nursing educators Joyce Newman Giger and Linda G. Haddad, Transcultural Nursing shows how an understanding of cultural variations and individual patient needs will help you provide safe and effective care. UNIQUE! The six key aspects of cultural assessment each receive a full chapter of coverage, allowing you to also apply the Transcultural Assessment Model to cultures not covered in the text. Case studies and critical decision-making questions help you apply the assessment framework to practice. 23 chapters on specific cultural groups apply this assessment model to the clients most commonly encountered in United States health care settings, with nearly all chapters written by contributors who are part of that ethnic group. Client care plans in culture-specific chapters show how to apply principles to the needs of individuals. Review questions reinforce your understanding of cultural principles, with answers found in the back of the book. Discussions of spirituality throughout the text provide a holistic, integrated approach to culture, beliefs, and assessment. NEW co-author Dr. Linda Haddad is an internationally recognized cultural scholar who has taught nursing around the globe, has acted as an advisor and coordinator for the World Health Organization, and has published over 30 scholarly articles on nursing with a focus on understanding the cultural implication to care. UPDATED! Cultural chapters are completely revised to reflect the shifting experiences of cultural groups in our society.

Transcultural Nursing - E-Book A comprehensive survey of the analytical treatment of MRI physics and engineering. It brings readers to a position where they are able to cope with the problems

that arise when applying MRI to medical problems or when (sub)systems or sequences for new applications are designed. Special attention is paid to the treatment of intrinsic artefacts of the different sequences, which can be described in a mathematically uniform way for the different scan methods. The book contains numerous images, showing specific properties of the different scan methods, which include RARE, GRACE, EPI, and Spiral Scan. The ideal step-up to reach the required level for independent research or development in the field of MRI applications or system design.
