*Sample size determination is the act of choosing the number of observations or replicates to include in a statistical sample. The sample size is an important feature of any empirical study in which the goal is to make inferences about a population from a sample. In practice, the sample size used in a study is usually determined based on the cost, time, or convenience of ...*

*25.03.2021 · The novel coronavirus (COVID-19) that was first reported at the end of 2019 has impacted almost every aspect of life as we know it. This paper focuses on the incidence of the disease in Italy and Spain—two of the first and most affected European countries. Using two simple mathematical epidemiological models—the Susceptible-Infectious-Recovered model ...*

*17.03.2022 · With the increasing demand for steel strips in the market, its performance is required to be higher and higher. The laminar cooling process (LCP) is an important procedure in hot steel strip rolling, which is used to cool the steel strip from an initial temperature of roughly 800-950 ° C down to a coiling temperature (CT) of roughly 550-700 ° C [1,2].*
