### Blankets of Fire

This paper analyzes the participation of the US Twelfth Air Force in the Mediterranean theater of operation from 1943 to 1944 and also studies the coalition and joint operations required in the air campaign. Coalition and joint warfare provides numerous command, control, and coordination problems that are not easily de-conflicted. The requirements of the coalition air campaign in the Mediterranean theater provided significant challenges to the leadership of the US Army Air Forces (AAF). Prewar Army Air Corps doctrine focused on strategic bombing and aerial interdiction. Air- men lacked a well thought-out tactical support doctrine and had no doctrine for supporting amphibious operations. The mission of the AAF in the North African and Italian campaigns was the winning of air superiority. The Twelfth Air Force had to adopt new tactics and operational techniques to support the Allied landings at Sicily, Salerno, and Anzio, Italy, against the formidable German Luftwaffe. The Mediterranean theater was the first theater to encounter the use of precision-guided munitions in the form of radio-controlled glide bombs dropped by the Luftwaffe. The Mediterranean theater was designated a secondary theater of war, resulting in the Twelfth Air Force operating with inadequate resources, as aircraft and crews were periodically reassigned to units supporting the Combined Bomber Offensive in the European theater of operations. While supporting the Mediterranean theater, the Twelfth Air Force operated alongside the British Royal Air Force (RAF) and was routinely tasked with supporting operations of both the US Fifth and British Eighth Armies. This provided significant command, control, and communication (C3) problems that had to be addressed to optimize the effectiveness of Allied airpower.

This book provides students with an understanding of the motives behind the Japanese attack on Pearl Harbor and the consequences of this action on Japan, on the United States, and on the outcome of World War II. • Addresses historical controversies such as whether Roosevelt knowingly allowed the Japanese to attack Pearl Harbor in order to bring the United States into World War II and what the consequences of a third Japanese carrier strike might have been • Includes primary source documents—including oral histories by participants in and victims of the attack—that help readers to better grasp the motivations behind the Japanese attack, the reasons why Pearl Harbor was not better able to resist, and what it was like to live through the attack itself • Provides an ideal resource for high school and college students as well as interesting reading for general audiences seeking authoritative historical information on the Pearl Harbor attacks

Among other pieces of professional and expert advice, the US Air Force Survival Handbook tells readers about: Finding your way without a map First aid for illness and injury Finding food and water Building a fire Concealment techniques Using ropes and tying knots Survival at sea Signaling for help Animal tracking Predicting the weather Building shelters Released on the 70th anniversary of the US Air Force, this book outlines specific survival threats found in many different types of terrain and how to survive them. It is invaluable to all who enjoy the outdoors and anyone who seeks insight into the training tactics of the US Air Force.

### American Aces against the Kamikaze

Fighter pilot Butch O'Hare became one of America's heroes in 1942 when he saved the carrier Lexington in what has been called the most daring single action in the history of combat aviation. In fascinating detail the authors describe how O'Hare shot down five attacking Japanese bombers and severely damaged a sixth and other awe-inspiring feats of aerial combat that won him awards, including the Medal of Honor. They also explain his key role in developing tactics and night-fighting techniques that helped defeat the Japanese. In addition, the authors investigate events leading up to O'Hare's disappearance in 1943 while intercepting torpedo bombers headed for the Enterprise. First published in 1997, this biography utilizes O'Hare family papers and U.S. and Japanese war records as well as eyewitness interviews. It is essential reading for a true understanding of the development of the combat naval aviation and the talents of the universally admired and well-liked Butch O'Hare.

"In 1945 my father, John Bradley, and other members of Combat Team 28 raised a flag on Iwo Jima. Now with The Lions of Iwo Jima, [Haynes] helps America understand how it was done."—James Bradley, author of *Flags of Our Fathers* and *Flyboys* Combat Team 28, one of the greatest units fielded in the history of the U.S. Marines, landed on the black sands of Iwo Jima on February 19, 1945. The unit, 4,500 men strong, plunged immediately into ferocious combat, and by the time the battle ended, 70 percent of the men in the team's three assault battalions were killed or seriously wounded. The stories told here, many for the first time, will seem too cruel, too heartbreaking to be believed. As one veteran remarked, "Each day we learned a new way to die." Major General Fred Haynes, then a young captain, is the last surviving officer in CT 28 who was intimately involved in planning and coordinating all phases of the team's fight on Iwo Jima. In this astonishing narrative, Haynes and James A. Warren recapture in riveting detail what the Marines experienced, drawing on a wealth of previously untapped documents, personal narratives, letters, and interviews with survivors to offer fresh interpretations of the fight for Suribachi, the iconic flag-raising photograph, and the nature of the campaign as a whole.

These pilots called themselves the 'Tokyo Club'. It was a simple task to become a member. All you had to do was strap yourself into a heavily loaded P-51 Mustang, take off from Iwo Jima, fly 650 miles north over the sea — often through monsoon storms — in your single-engined aircraft to Japan, attack a heavily defended target and then turn around and fly home despite a shrinking fuel supply and perhaps battle damage as well. Do it once and you earned membership in the club. Do it 15 times and you earned a trip home. But make one mistake or have one touch of bad luck, and you had a very good chance of ending up dead. This book tells the little-known story of these brave men and their efforts to defeat the aerial forces defending Japan.

This book is a study of the process by which herbicidal military policy was made in Southeast Asia. The author relates the intense controversy over the effects of the Agent Orange spraying program. He connects policy to operations, showing how pressure from scientists and disagreements within the government imposed limits on the program. He explores the technical difficulties in spraying herbicides; and he pays tribute to the Ranch Hand airmen who flew planes "low and slow" over enemy positions (altogether, Ranch Hand aircraft took over 7,000 hits). Since the 1975 renunciation of the use of herbicides, this military episode has remained unique in U.S. history. Includes notes, appendices, bibliography, and photos.

The Japanese High Command realised that the loss of Okinawa would give the Americans a base for the invasion of Japan. Its desperate response was to unleash the full force of the Special Attack Units, known in the west as the Kamikaze ('Divine Wind'). In a series of mass attacks in between April and June 1945, more than 900 Kamikaze aeroplanes were shot down. Conventional fighters and bombers accompanied the Special Attack Units as escorts, and to add their own weight to the attacks on the US fleet. In the air battles leading up to the invasion of Okinawa, as well as those that raged over the island in the three months that followed, the Japanese lost more than 7,000 aircraft both in the air and on the ground. In the course of the fighting, 67 Navy, 21 Marine, and three USAAF pilots became aces. In many ways it was an uneven combat and on numerous occasions following these uneven contests, American fighter pilots would return from combat having shot down up to six Japanese aeroplanes during a single mission.

## Airpower Journal

"No One Avoided Danger" is a detailed combat narrative of the 7 December 1941 Japanese attacks on NAS Kaneohe Bay, one of two naval air stations on the island of O'ahu. Partly because of Kaneohe's location—15 air miles over a mountain range from the main site of that day's infamous attack on Pearl Harbor—military historians have largely ignored the station's story. Moreover, there is an understandable tendency to focus on the massive destruction sustained by the U.S. Pacific Fleet. The attacks on NAS Kaneohe Bay, however, were equally destructive and no less disastrous, notwithstanding the station's considerable distance from the harbor. The work focuses on descriptions of actions in the air and on the ground at the deepest practical, personal, and tactical level, from both the American and Japanese perspectives. Such a synthesis is possible only by pursuing every conceivable source of American documents, reminiscences, interviews, and photographs. Similarly, the authors sought out Japanese accounts and photography from the attacks, many appearing in print for the first time. Information from the Japanese air group and aircraft carrier action reports has never before been used. On the American side, the authors also have researched the Official Military Personnel Files at the National Personnel Records Center and National Archives in St. Louis, Missouri, extracting service photographs and details of the military careers of American officers and men. The authors are among the first historians to be allowed access to previously unused service records. The authors likewise delved into the background and personalities of key Japanese participants, and have translated and incorporated the Japanese aircrew rosters from the attack. This accumulation of data and information makes possible an intricate and highly integrated story that is unparalleled. The interwoven narratives of both sides provide a deeper understanding of the events near Kaneohe Bay than any previous history.

### 7 December 1941: The Air Force Story

**\*A NATIONAL BESTSELLER!\*** The New York Post calls *The Last Fighter Pilot* a "must-read" book. From April to August of 1945, Captain Jerry Yellin and a small group of fellow fighter pilots flew dangerous bombing and strafe missions out of Iwo Jima over Japan. Even days after America dropped the atomic bombs on Hiroshima on August 6 and Nagasaki on August 9, the pilots continued to fly. Though Japan had suffered unimaginable devastation, the emperor still refused to surrender. Bestselling author Don Brown (*Treason*) sits down with Yellin, now ninety-three years old, to tell the incredible true story of the final combat mission of World War II. Nine days after Hiroshima, on the morning of August 14th, Yellin and his wingman 1st Lieutenant Phillip Schlamberg took off from Iwo Jima to bomb Tokyo. By the time Yellin returned to Iwo Jima, the war was officially over—but his young friend Schlamberg would never get to hear the news. *The Last Fighter Pilot* is a harrowing first-person account of war from one of America's last living World War II veterans.

### Defenseless: The Political Sabotage of Pearl Harbor

This book fills the gap for concise but comprehensive literature on this interdisciplinary topic, involving chemical, physical, biological and engineering challenges. It provides broad coverage of the most important fields of modern hydrogen technology: hydrogen properties, production, storage, conversion to power, and applications in materials science. In so doing, the book covers all the pertinent materials classes: metal hydrides, inorganic porous solids, organic materials, and nanotubes. The authors present the entire view from fundamental research to viable devices and systems, including the latest scientific results and discoveries, practical approaches to design and engineering, as well as functioning prototypes and advanced systems.

### Court-martial Reports of the Judge Advocate General of the Air Force

This is the story of the elite Japanese Army Air force (JAAF) aces that flew the Kawasaki Ki-61 Hien (Swallow), and the Ki-100 Goshikisen in the Pacific Theatre of World War 2. The former, codenamed 'Tony' by the allies, was a technically excellent aircraft, possessing power, stability and a good rate of climb - differing radically from the usual Japanese philosophy of building light, ultra-maneuvrable fighters. Its pilots soon realised, however, that the type was plagued by a number of dangerous mechanical issues. Then as the war moved relentlessly closer to Japan's doorstep, a desperate, expedient innovation to the Ki-61 airframe by fitting it with a radial instead of inline engine resulted in one of the finest fighters of World War 2 - the Ki-100. This book uses the latest findings to provide a gripping account of some of the most remarkable and hard-pressed fighter pilots of the war. It reveals how these men, unlike so many of their unfortunate late-war colleagues, could surprise Allied aircraft in high-performance fighters and claim successes in the face of enormous odds.
